Examiner's Amendment

Response to Amendment

1. Applicant's amendment filed 10/23/2006 and 10/16/2006 has been entered and carefully considered.

Claims 1, 4, and 9 have been amended.

Claims 13-14 have been canceled.

The specification has been amended.

Examiner's Amendment

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Attorney Martin E. Miller on November 8, 2006.

The applicant has been amended as follows:

1. (Currently Amended) A computer-implemented method for determining parameters of an equivalent circuit representing a transmission section of an electrical network, where the transmission section is representable as having at least two interfaces with other sections of the network, wherein the method comprises the steps of:
 - a) measuring, by means of at least two synchronized phasor measurement units residing at each of the at least two interfaces, a voltage phasor at the interface and

Art Unit: 2863

a phasor of a current flowing through the interface, measurements at the different interfaces being made essentially simultaneously,

b) computing, from said voltage and current phasors, values of impedances constituting the equivalent circuit; and

(c) displaying changes in the equivalent circuit based on the computed values of impedances.

9. (Currently Amended) A computer program embodied on a computer readable medium for determining parameters of an equivalent circuit representing a transmission section of an electrical network having at least two interfaces with other sections of the network, which computer program is loadable and executable on, a data processing unit and which computer program, when being executed, performs the steps of computing, from essentially simultaneous measurements at each of the different interfaces of a voltage phasor at the interface and a phasor of a current flowing through the interface, values of impedances constituting the equivalent circuit, and displaying changes in the equivalent circuit based on the computed values of impedances.

Reasons for Allowance

2. Claims 1-12 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

Please see the previous office action and applicant's argument filed on 10/16/2006, 05/01/2006.

Regarding claim 1, in combination with other limitations of the claims, none of the prior art of record teaches or suggests the combination of a computer-implemented method for determining parameters of an equivalent circuit representing a transmission section of an electrical network, where the transmission section is representable as having at least two interfaces with other sections of the network, wherein the method comprises the steps of measuring, by means of at least two synchronized phasor measurement units residing at each of the at least two interfaces, a voltage phasor at the interface and a phasor of a current flowing through the interface, measurements at the different interfaces being made essentially simultaneously and computing, from said voltage and current phasors, values of impedances constituting the equivalent circuit. It is these limitations as they are claimed in the combination with other limitations of claim, which have not been found, taught or suggested in the prior art of record, that make these claims allowable over the prior art.

Regarding claim 9, in combination with other limitations of the claims, none of the prior art of record teaches or suggests the combination of a computer program embodied on a computer readable medium for determining parameters of an equivalent circuit representing a transmission section of an electrical network having at least two interfaces with other sections of the network, which computer program when being executed, performs the steps of computing, from essentially simultaneous measurements at each of the different interfaces of a voltage phasor at the interface and a phasor of a current flowing through the interface, values of impedances constituting the equivalent circuit. It is these limitations as they are claimed in the

Art Unit: 2863

combination with other limitations of claim, which have not been found, taught or suggested in the prior art of record, that make these claims allowable over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
